

Tall Fescue Streetscape

From Our Field to Your Job, We Get it Done!

For over 46 Years, Green Valley Turf Co. has been working with the commercial landscape industry. When your project is close to completion, we understand sod needs to be installed quickly, economically and professionally. Sod can make or break a project. Our professionally installed big roll sod will transform your site into a complete landscape.

We install our premium quality sod with our own large crews to make the installation process efficient, tight and timely. These crews carry extra equipment to insure break downs do not slow our progress. We also have our own fleet of trucks to get material to the job in a timely fashion and will work with you on scheduling.

We understand how important grade is to the final product and developed our own big roll installation machines that do not rut properly prepared soil and can handle steep terrain. During installation we fertilize, patch, clean and roll as we go allowing water to be quickly applied to avoid stress.

Our premium quality sod blends are the latest varieties and cultivars that excel in our dry climate. From Bluegrass to Buffalograss, we offer the widest variety of blends for all your needs. We grow all of our fields from "Blue Tag" certified seed and do not regrow. Call for a bid on your next project.
