

Bunker Installation, Pradera Golf Club 2004

Less Seams, Get Into Play Quicker!

Green Valley Turf Co. specializes in installing our Premium Quality Big Roll Sod for the golf industry. Our GVT 2000 Kentucky bluegrass blend of low mow varieties is maintained at 5/8" from initial seeding and is dense, dark and fine textured for golf applications. We developed our own big roll installation machines that do not rut properly prepared soil and can handle slopes and steep terrain. We understand how important grade is to the final surface and dedicate a crew member to fine grading during installation. All of our forklifts are equipped with flotation tires so we do not disturb grade or the surrounding areas.

Green Valley Turf Co. sod crews are trained professionals and perform at golf industry standards. We run large crews of 8-14 persons that carry extra equipment to make the installation process efficient, tight and timely. We also specialize in installing greens with big roll Bentgrass sod from Sand Based Solutions, LLC. Let us put our 42 years of sod experience into your next tee project, bunker renovation, green or entire course. Call the Big Roll Experts for a bid.
