

T-1

Bentgrass Sod

T-1 creeping bentgrass is a variety characterized by aggressive tillering, fine texture and dark green color. Due to high tiller density, T-1 helps crowd out Poa annua and repairs rapidly from ball marks, aerification and divots. T-1 bentgrass sod is grown in 100% USGA spec sand to ensure root zone integrity is maintained. This sod is well adapted to a wide range of environmental conditions and is forgiving when climate or culture practices are not ideal. T-1 provides a luxurious putting surface, very upright, yet remarkably easy to manage.

*Grown in 100% USGA Spec Sand
Greens Quality Sod*

Aggressive Tillering

High tiller density helps crowd out Poa annua, consistently ranked at the top of the NTEP trials for tiller density

Rapid Recovery

Repairs rapidly from ball mark and aerification damage, helps get greens and tees back into ideal playing conditions quickly

Dark Green Color

Consistently ranked top in NTEP trials for genetic color

Sustainable Maintenance

Adaptable to a wide range of maintenance programs, planted worldwide on more golf courses in the last 5 years than any other bentgrass

Uses

Golf courses putting greens, tees, fairways

Sod Specs

T-1 creeping bentgrass in 100% USGA spec sand on plastic

Texture

Fine blade, dark green color, moderate to high density

Mowing Height

Sod maintained at 0.135" HOC

Harvest Options

Slabs 21"x41", Big Rolls 4'x90', call for more options
