

"Because Legacy® Buffalograss requires less maintenance, I can spend more time with my family. Less mowing and less watering is a good thing."

Mike & Karla, Aurora, Colorado

Legacy® Buffalograss is a native sod forming grass that uses a lot less water and is ideal for xeric landscaping. A grass native to the plains of Colorado, Legacy® thrives on only 1/4 inch of water per week during the summer heat. Legacy® can reduce your lawn watering up to 75%. A soft textured sage green turf, Legacy® Buffalograss has a slow growth habit which means a lot less mowing. You can have a beautiful manicured lawn with Legacy® or let it go un-mowed for a native look. Leed Certified and 2001 winner of the "Green Thumb Award".

Up to 75% water savings, xericape native lawns, full sun to light shade

A True Native Grass

A grass native to the plains of Colorado, Legacy® greens up in April and is fully dormant by October. Best grass for xericape lawns.

Uses a Lot Less Water

Legacy® can reduce your lawn watering up to 75% and go several weeks without watering.

Less Mowing

For a manicured lawn, mow every 2 weeks. For a natural look, mow once in the spring and let it go. Legacy® stops growing at 6 inches.

Soft Texture and Color

Legacy® is a sage green color and has soft narrow blades. Modernly dense grass handles low to medium traffic.

Uses

Xeric lawns, water wise lawns, streetscapes, 2 to 4 Leed points (WE-1)

Sod Blend

100% Legacy® Buffalograss

Texture

Fine soft leaf, sage green color

Mowing Height

2" to 5", or mow once a year in the spring at 2" and let it go
