

Uses 30% Less Water

*"We love our RTF®  
Water Saver sod. It  
holds up great to our  
dog and fills in quick."*

Stuart & Fran, Parker, Colorado

RTF® Water Saver is a patented self-repairing rhizomatous tall fescue that has a deep root system for increased water savings. A rhizome is an underground stem that penetrates laterally through the soil to spread the plant. Rhizomes send shoots up to the soil surface forming a new plant while extending new roots downward. The rhizomatous nature of RTF® Water Saver fills in bare spots and develops a deep root system that can go longer between watering. This hardy medium texture blend is also very resistant to dog urine spots.

*Up to 30% water savings, self-repairing fills in, shade to full sun*

#### **Increased Water Savings**

A New Mexico State University trial showed RTF® maintained high turf quality with 30% less water. Go longer between waterings.

#### **Strong, deep root system**

Excellent heat and drought tolerance with less irrigation. Extensive root system draws moisture from a deeper soil profile.

#### **Produces a thick even lawn**

Due to rhizomes, RTF® stays dense and thick and does not form clumps like most tall fescues. Quickly fills in damaged bare spots.

#### **A Better Tall Fescue**

Self-repairing turf. Quickly fills in damaged or open spots. We are the only licensed RTF® sod grower for the Denver metro area.

#### **Uses**

Home lawns, pets & kids, streetscapes, parks, commercial properties, golf bunkers, rough, naturalized no mow areas

#### **Sod Blend**

90% Rhizomatous Tall Fescue, 10% KBG

#### **Texture**

Medium leaf blade, deep green color

#### **Mowing Height**

2" to 5", or No Mow RTF® will only grow to 12" in height

**Green Valley Turf Co.**
