

Excels In High Heat

"Thermal Blue stands up well to the heat and provides a safe playing surface for our family. It's also great to relax and enjoy a cool, clean environment."

Ryan & Tanner, Littleton, CO

Thermal Blue is a Texas blue hybrid that excels in high temperatures. With increased heat and drought tolerance, this grass can go longer between irrigation and uses less water. A cross between native Texas bluegrass and Kentucky bluegrass, Thermal Blue has aggressive spreading rhizomes enabling it to recover quickly from drought stress. Its spreading ability allows it to recover quickly from wear and fill in weak areas. Thermal Blue maintains great turf quality with reduced lawn maintenance. A fine textured turf that excels in medium shade to full sun.

Loves the summer heat, full sun to medium shade, drought tolerant

High Heat Tolerance

Tolerates summer heat extremely well and excels in high temperatures. Can go longer between watering.

Added Drought Stress

Aggressive rhizomes equipped it to withstand hot, dry conditions & enables this turf to recover quickly after drought stress.

Great Appearance

A high density excellent quality turf. Deep green color, fine textured turf with a traditional lawn appearance.

Low Maintenance

Maintains an excellent turf quality under less than favorable maintenance. Less water and reduced mowing.
