Starter

20-20-10 +1 Iron

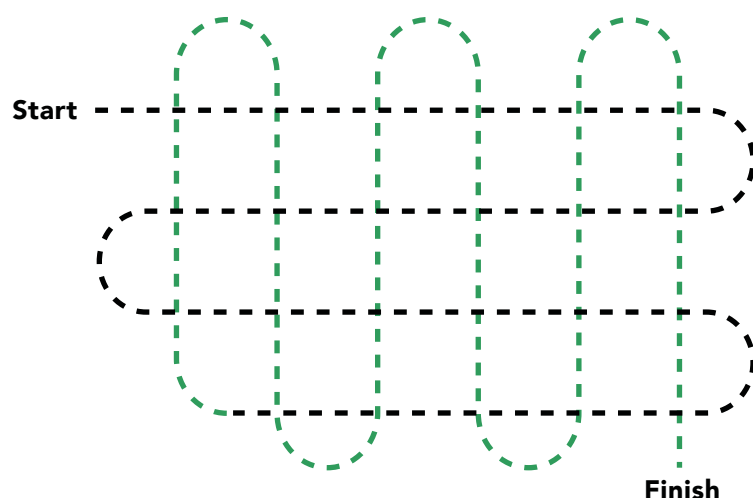

N	NITROGEN makes grass grow and become greener	20%
P₂O₅	PHOSPHATE stimulates root and seedling development	20%
K₂O	POTASH promotes protein, sugar, and starch production	10%
Fe	IRON creates dark green grass color	1%

Directions for use

Spreader Settings

For best results, use a rotary style fertilizer spreader. Drop style spreaders are harder to get even coverage and tend to leave streaks. Due to various spreaders and manufacturers, it is best to calibrate your spreader to insure you are putting on the proper amount of fertilizer. Application rate information that came with your spreader should include what setting you need to use to apply 5-10 lbs per 1,000 sq.ft. of heavy weight, dense material.

Diagram of Half Rate Application Pattern

To insure even coverage, cut the application rate in half. Start at a corner of the area and go back and forth working your way across in 5' to 8' passes. Repeat this pattern over the area at 90 degrees. This assures that the fertilizer is applied evenly.

Conserve Water

A properly fed lawn is more efficient at using water. Feeding your lawn with Green Valley lawn fertilizer will grow a thicker lawn with deeper roots that help absorb nutrients and water. Essential nutrients help prepare your lawn for heat, drought and stress. Conserve water by maintaining a healthy lawn. Take advantage of rain when possible, water deep and infrequent when needed.

Application Rates

Established Lawns	5 - 8 lbs per 1,000 sq. ft.
Newly sodded Lawns	5 - 8 lbs per 1,000 sq. ft.
Preplant Sodding	8 - 10 lbs per 1,000 sq.ft.
Preplant Seeding	8 - 10 lbs per 1,000 sq.ft.

Apply when lawn is dry to touch. Sweep all particles off the walkways. Water after application.

Before sodding, apply fertilizer to the dry soil. Apply fertilizer and rake in prior to seeding.

Newly Sodded Lawns
2 to 4 weeks after sodding, apply 5 - 8 lbs per 1,000 sq.ft.

Safe for kids and pets after fertilizer has been watered in and grass is dry to the touch

Fertilize by the Season

EARLY SPRING
Feeding in early spring helps grass recover from winter and green up

LATE SPRING
Late spring feeding will thicken lawn and build deep roots to combat summer stress

SUMMER
Summer feeding gives grass energy though high heat and drought stress

FALL
Feeding in the fall helps grass recover from summer stress and prepare for winter

Guaranteed Analysis

Total Nitrogen (N).....	20%
Available Phosphate (P ₂ O ₅).....	20%
Soluble Potash (K ₂ O).....	10%
Sulfur (S).....	5%
Iron (Fe).....	1%

WARNING

KEEP OUT OF REACH OF CHILDREN
Causes mild skin irritation

Manufactured by Agfinity Inc. for Green Valley Turf Co.
13159 N US Highway 85, Littleton, CO 80125

Precautionary Statements

Slight to moderate irritant to skin and eyes
Dust may cause slight irritation to the upper respiratory tract.
May cause gastrointestinal upset.
If exposed or concerned: Get medical advice/attention.

Storage and Disposal

Dispose of contents in accordance with federal, state and local regulations.
Store locked up.
