

G Lawn Program

For over 55 years, we have been growing grass in Colorado. We blend our lawn fertilizers for Colorado soils and our dry climate. We offer fertilizers that will keep your lawn healthy all year long. Our organic lawn fertilizer will improve soil health by feeding the microorganisms in your soil. Colorado yards perform best with four feedings per year. For a beautiful, healthy lawn, follow our four-step fertilizer program.

Step 1
March - April

EARLY SPRING

Quick Feed 20-20-10 1fe

Start the season with Quick Feed 20-20-10. The root system of your lawn has been growing slowly during the winter. When your grass comes out of dormancy, it needs to replenish depleted nutrients. This first feed will help your lawn recover from the winter and feed the hungry root system.

Ferti-lome EV-N-Spred Setting - 26

8 lbs. per 1,000 sq.ft. of lawn

Step 2
May - June

LATE SPRING

Slow Release 20-5-5 3fe

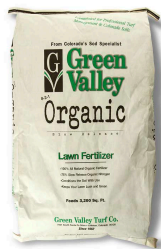

The late spring feeding with our Slow Release 20-5-5 will thicken up your lawn and continue to build a deep root system to combat summer stress for up to eight weeks. This extended-release fertilizer will slowly feed your grass through late spring into summer without promoting excessive growth.

Ferti-lome EV-N-Spred Setting - 26

8 lbs. per 1,000 sq.ft. of lawn

Step 3
July - August

SUMMER

Organic 8-2-1

Our 100% Organic 8-2-1 lawn fertilizer provides just the right amount of nutrients during the summer heat. Our low nitrogen Organic fertilizer releases nutrients slowly for up to six months and improves soil health feeding the microorganisms. The Summer heat helps convert the organics into usable nutrients quicker.

Ferti-lome EV-N-Spred Setting - 30

12.5 lbs. per 1,000 sq.ft. of lawn

Step 4
Sept. - Oct.

FALL

Quick Feed 20-20-10 1fe

Prepare your lawn for winter with Quick Feed 20-20-10 in fall. This aids with recovery from the summer heat and helps the grass store carbohydrates for the winter. Fertilize when the top growth of your lawn has slowed down, but the grass is still green and photosynthesizing.

Ferti-lome EV-N-Spred Setting - 26

8 lbs. per 1,000 sq.ft. of lawn

New Sod Fertilizer

Use Quick Feed 20-20-10 for all new sod during installation and the first month. Apply to the soil before installing the sod.

Lawn Rehab

If your grass is unhealthy, off color and not growing, use Quick Feed 20-20-10 at any time to bring it back to health.
