

HANES GEO COMPONENTS™

A Leggett & Platt® COMPANY

# Landscape Fabrics

## Product Benefits

- Minimizes light penetration - suppresses weed growth and prevents weed-seed germination.
- Reduces water evaporation from soil.
- Allows air, water, and nutrients to reach plants.
- Safe and easy to install.

## Woven

### Pro Platinum • Pro Platinum Plus

Pro Platinum™ & Pro Platinum Plus™ is a black woven needle-punched fabric which offers excellent tensile and tear strength with an added degree of UV resistance. The tiny needle-punched openings successfully restricts weed growth while freely allowing water and air to penetrate the soil. Colored stripes every 12 inches are added for easy plant alignment.

**Applications:** Mulched Areas on Hills and Slopes, Flower Beds, Under Decks, Patios, Sidewalks, and Active Weed Growth Areas.

### Pro Gold

Pro Gold™ is a 3 oz. woven polypropylene with extra UV stabilizers in the fabric that will last for years in direct sunlight. The tensile and puncture strength along with lines every 12" for plant alignment, make this product tough enough to stand up to the nursery grower market.

**Applications:** Greenhouses, Nurseries, and areas where Weed Barrier use is needed without using mulch or stone on top.

**Warranties:** Pro Ion - 8 Yr. • Pro Ion Plus - 15 Yr.  
Pro Silver/Steel - 10 Yr. • Pro Silver Plus / Steel Plus - 20 Yr.  
Pro Platinum - 20 Yr. • Pro Platinum Plus - 25+ Yrs.

## Non-Woven

### Pro Ion • Pro Ion Plus

Pro Ion Plus™ is a spunbond polypropylene that has a hydrophilic treatment that allows more air and water to pass through and reach the plant. This fabric is a professional weed barrier that is easy to cut while still providing a tough, thick weed barrier.

**Applications:** Flower Beds and Mulched Areas.

### Pro Silver • Pro Steel • Pro Silver Plus • Pro Steel Plus

Constructed of polyester fibers which provide exceptional UV stability and outstanding water and air permeability, Pro Silver™, Pro Steel, Pro Silver Plus™ and Pro Steel Plus™ serve as excellent weed barriers and filter fabrics while the strength characteristics make this fabric a superior in underlayment applications.

**Applications:** Behind Retaining Walls, Around Pipes, Under Patios, Sidewalks, Flower Beds and Mulched Areas.
